DETAILED ACTION

This application is a divisional of 09/191,920, filed November 13, 1998, which claims benefit to provisional application 60/065,825 filed November 14, 1997.

Applicants' amendment filed November 12, 2001, has been received and entered. Claims 1-134 have been canceled. Claims 135-182 have been added. Claims 135-182 are pending and currently under examination.

Election/Restriction

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 135-144, 152-161, 168-176, drawn to a non-human transgenic vertebrate, classified in class 800, subclass 3.
- II. Claims 145-150, 162-167, 177-182, drawn to a transgenic germ cell, classified in class 435, subclass 325.
- III. Claim 151, drawn to a method of producing a non-human vertebrate, classified in class 800, subclass 21.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different

Art Unit: 1632

inventions are drawn to two materially different products. In each case the products have different characteristics and have different potential uses.

Inventions III and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product of a transgenic vertebrate can be made by other methods known and used in the art.

Inventions II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the method of group III is not required for the generation of the transgenic germ cell of group II. Further, the germ cell can be made by methods known and used in the art not requiring the generation of a transgenic vertebrate.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and because the search required for one group would not be co-extensive with the remaining groups, restriction for examination purposes as indicated is proper.

Art Unit: 1632

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
